SUMMARY

Generative AI Engineer with 4+ years of experience designing LLM applications and scalable data pipelines on Azure. Expert in building production systems using GPT-4, LangChain, and RAG frameworks, backed by strong data engineering skills in Azure Data Factory and Databricks. Proven ability to deliver end-to-end AI solutions that automate workflows, generate insights, and drive measurable business impact.

TECHNICAL SKILLS

- **Programming:** Python, SQL, R, PySpark, JavaScript, React JS, Bash
- **Cloud Platforms:** Microsoft Azure (OpenAI, Data Factory, Databricks, Logic Apps, Web Apps, Data Lake, Functions), AWS, GCP
- **AI/ML & Generative AI:** GPT-4, GPT-4o, LangChain, LangGraph, RAG, LLMs, Prompt Engineering, Document Intelligence
- **Data Engineering & Big Data:** ETL/ELT, Data Modeling, Apache Airflow, Kafka, Apache Spark, Databricks, Delta Lake
- **Databases & Warehousing:** Snowflake, Azure SQL, PostgreSQL, AWS Redshift, BigQuery, DynamoDB
- **Visualization & BI:** Power BI, Tableau, Kepler.gl

PROFESSIONAL EXPERIENCE

Synergenix Inc

Gen AI Engineer

Jan 2026 - Present

Remote, USA

- Orchestrated 40% of project scope by developing **AI applications** for cyber risk using GPT models and ML algorithms, implementing **RAG methodology** for a 92% accurate document Q/A system and deploying via Azure DevOps.
- Engineered scalable **Azure data pipelines**, comprising **35%** of the data architecture, to process documents for **Generative AI** systems and perform data visualization to identify model performance inconsistencies.
- Accounted for **25%** of delivery by designing user interfaces and backend services on Azure Web Apps, integrating Azure OpenAI and **Cosmos DB** to operationalize models and automate secure deployments.

Community Dreams Foundations

Data Analyst

Jul 2025 – Jan 2026

Remote, USA

- Spearheaded the development of a centralized career database using **SQL**, achieving **99% data accuracy**—a critical prerequisite for training reliable, high-fidelity AI recommendation models and ensuring robust **Retrieval-Augmented Generation (RAG)**.
- Constructed **Python**-based web applications to refine data acquisition, compressing processing time by **40%** and architecting scalable data ingestion workflows essential for continuous AI model refinement.
- Developed a **predictive model** to forecast pipeline failures, reducing system downtime by 45% and ensuring **99.9% data availability** to maintain the resilient, uninterrupted data infrastructure that production AI systems depend on.

Illinois Behavior Risk Factor Surveillance System Laboratory

Data Specialist

May 2024 – May 2025

Dekalb, USA

- Implemented an end-to-end **Azure data pipeline**, developing a serverless API for data ingestion and using **Databricks** for PySpark transformations, achieving 95% automation with Azure Data Factory to load data into Azure SQL.
- Performed advanced analytics on health survey data, cleaning and structuring **1,000+ records** with **Python and SQL** to contribute 30% of the key dataset used for statewide epidemiological research and modeling.
- Drove data-driven insights by applying **exploratory data analysis** to identify geographic disease hotspots with 25% higher prevalence and built an automated validation script that reduced data errors by **60%**, accelerating research publication timelines.

Tata Consultancy Services Pvt Ltd

Data Scientist

Jul 2021 – Aug 2023

Hyderabad, India

- Pioneered the integration of an **Azure OpenAI LLM** into a PowerApp, which transformed risk assessment procedures, driving a 40% improvement in risk description accuracy.
- Architected a secure, scalable data pipeline with custom connectors and **refined prompt engineering**, achieving 95% **data integrity** for real-time AI inputs and reducing manual data processing time by **35%**.
- Advanced **predictive analytics** by developing time series models (Prophet, ARIMA) to reduce payment delays by **20%** and conducting fraud pattern analysis that boosted detection accuracy by **25%**.

Securium Fox Technologies

Data Analyst

Jun 2020 – Jul 2021

Vijayawada, India

- Designed a scalable ETL pipeline using **SQL Server Integration Services (SSIS)** to consolidate high-volume transactional data from over 50 retail sources into a centralized **data warehouse**, improving query performance by **30%**.
- Streamlined **data pipelines** by implementing standardized stored procedures, improving data consistency across reports and empowering real-time decision-making; reduced **ETL** job failure rate by 10%.
- Enhanced complex raw datasets into visually compelling **Tableau** dashboards, facilitating real-time inventory oversight and empowering the sales team with actionable insights which bolstered stock control by **20%**.

EDUCATION

Northern Illinois University

Master of Science (M.S) in Operations Management and Information Systems

Dekalb, USA

Aug 2023 - May 2025

Velagapudi Ramakrishna Siddhartha Engineering College

Bachelor of Technology (B.Tech) in Information Technology

Vijayawada, India

Jun 2017 - Jun 2021
